

Section 11.3 HW Guide

The HW in this section is a mix of confidence intervals & hypothesis tests, some with summary information and some with data.

- 1: This is a two-mean test with summary. Once you complete the hypothesis test, you will also construct a confidence interval.
- 2, 8: This is a confidence interval problem, with summary.
- 3, 6: Two-mean hypothesis test, with data.
- 4: Hypothesis test & confidence interval, with data.
- 5: Confidence interval, with data.
- 7: You can perform this test using the summary information provided (mean & standard deviation) or using the data set provided.
- 9: Interpreting the output provided.
